

Lecture Abstract

Event: Webinar on Gynaecological Oncology Clinical Pathological Conference

Date: April 14, 2022

Time: 17:00 – 18:00 (HKT)

Format: Zoom Webinar

The Webinar presents a dedicated Clinical Pathological Conference (CPC) in the field of gynaecological oncology, offering a unique platform for interdisciplinary learning and collaboration. Bringing together specialists in obstetrics and gynaecology, anatomical and cellular pathology, and allied healthcare professionals, this event aims to enhance clinical reasoning, diagnostic accuracy, and multidisciplinary management of complex gynaecological oncology cases.

The session will feature two in-depth case presentations, each carefully selected to highlight the critical interplay between clinical presentation, pathological findings, and therapeutic decision-making. The Clinical Pathological Conference format allows for a systematic review of each case, beginning with the clinical history and examination findings, followed by a detailed discussion of the pathological correlates, and concluding with an exploration of management strategies and outcomes.

Case Presentations:

The first case will be presented by **Dr. YEUNG Suet Ying, Carol**, Associate Consultant in the Department of Obstetrics & Gynaecology at The Chinese University of Hong Kong, Prince of Wales Hospital. Dr. Yeung will present a clinical case that underscores the diagnostic challenges and management considerations in gynaecological oncology, setting the stage for a detailed pathological correlation.

The second case will be delivered by **Dr. Joshua J.X LI**, Associate Consultant and Clinical Assistant Professor (honorary) in the Department of Anatomical and Cellular Pathology at The Chinese University of Hong Kong, Prince of Wales Hospital. Dr. Li will provide a complementary perspective, focusing on the pathological dimensions of a gynaecological oncology case, highlighting key histopathological features, diagnostic pitfalls, and the role of ancillary testing in guiding clinical care.

Following the case presentations, a moderated Q&A session will offer attendees the

opportunity to engage directly with the speakers, facilitating an interactive discussion on diagnostic approaches, pathological interpretation, and multidisciplinary collaboration in the management of gynaecological cancers.

This Clinical Pathological Conference is designed to meet the educational needs of obstetricians, gynaecologists, pathologists, nurses, midwives, and laboratory professionals seeking to deepen their understanding of the clinico-pathological correlation in gynaecological oncology. By bridging the perspectives of clinical and pathology specialists, the session aims to foster a more integrated approach to patient care, ultimately contributing to improved diagnostic precision and treatment outcomes.
